

Title: Wildlife Sanctuary Management System

Objective

The system is designed to manage and monitor wildlife within a sanctuary by maintaining structured data about animals, their health status, habitat locations, feeding schedules, and medical treatments.

Business Requirements

- Track individual animals with attributes like species, age, gender, and location.
- Monitor health status and medical history.
- Manage medicine inventory and treatment records.
- Assign caretakers/veterinarians to animals.
- Track feeding schedules and diet plans.
- Maintain habitat/zones within the sanctuary.
- Enable reporting and analysis (e.g., sick animals, medicine usage).

Users

- Admin (full access)
- Veterinarian (health + treatment updates)
- Caretaker (feeding + monitoring)

Key Features

- Animal tracking
- Health monitoring
- Treatment logging
- Medicine inventory management
- Zone management
- Reporting system
